

Carriage Roller

Carriage Rollers - Carriage rollers are specifically designed bearings that are used on lift masts to be able to help them function within challenging environmental conditions. Lift masts are often subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is frequently exposed to environmental influences such as heat, dust, cold, contamination, aggressive ambient air and moisture. Therefore, the guidance arrangements of lift masts have to be specifically tough and have a specific high load carrying capability.

Carriage rollers have been developed as the solution for working in various environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts should be cost-effective and maintain operational security while having the ability to deal with a specifically high load carrying capacity.
