

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is actually a hydraulic device that allows the individual driving to control the forklift without leaving the seat. They are constructed out of top quality materials and are intended to withstand the most challenging procedures and work surroundings. Side shifting models have the added ability to be able to laterally position the arms or the entire load in order to facilitate more precise lifting and placement in a quicker and more efficient manner.

The only one of its kind fork pocket design could enable operators to safely swing the unit's forks without any fear of damaging the positioning cylinders. This can allow the operator the choice to either perform independent or simultaneous blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on available units.
